Dear Sirs

Bridgewater Road, QEOP

Imported Soil Analysis – Allotment Topsoil

Source: London Rock

We have completed the analysis of the sample referenced *LR Allotment Topsoil*, recently received from London Rock Supplies Ltd for the Bridgewater Road, Queen Elizabeth Olympic Park project and have pleasure reporting our findings.

The purpose of the analysis was to determine the sample's compliance with the requirements of *Appendix 6/8-16 Allotment Topsoil* of the project specification, *Queen Elizabeth Olympic Park Legacy Transformation – Olympic Park Infrastructure Specification Earthworks Appendix 6* – as listed in the T Loughman & Co Ltd Inspection & Test Plan, (ref: 15/014/12 ITP 01). The results for potential contaminants have been assessed against the Atkins *Site-Specific Assessment Criteria (SSACs) – Human Health Separation Layer for Zone PDZ8/CZ8c, Allotments*.

ANALYTICAL SCHEDULE

The sample was submitted to the laboratory for a range of physical and chemical analyses in accordance with the requirements of the specification. The following parameters were determined:

- Visual examination to record Munsell colour, moisture status, aerobic state, the presence of any deleterious materials, unusual odours (e.g. petroleum hydrocarbons);
- detailed particle size analysis;
- stone content (>2mm, >20mm, >50mm);
- visible contaminants (>2mm) (of which glass/sharps or plastic);
- pH value;
- calcium carbonate;
- electrical conductivity values (water and CaSO₄ extracts);
- exchangeable sodium percentage;
- organic matter content;
- total nitrogen;

Tim O'Hare Associates LLP
Howbery Park Wallingford Oxfordshire OX10 8BA
T: 01491 822653 E: info@toha.co.uk
www.toha.co.uk

- carbon:nitrogen ratio;
- extractable phosphorus, potassium and magnesium;
- phytotoxic contaminants (Cu, Ni, Zn);
- water-soluble boron;
- Limiting values for harm to human health (ref: SSACs);

RESULTS OF ANALYSIS

The results of this process are presented on the attached Certificate of Analysis, and a summary of our findings is provided below.

We have cross-referenced the results against *Appendix 6/8-16 Allotment Topsoil* and the *Site-Specific Assessment Criteria (SSACs) for Zone PDZ8/CZ8c*.

Visual Examination

The sample was described as a brown (Munsell Colour 10YR 4/3), dry, friable SANDY LOAM with a weakly developed, fine to coarse granular structure. The sample was moderately stony (flints). No unusual odours, deleterious materials, roots or rhizomes of pernicious weeds were observed.

Horticultural Parameters

The sample was largely compliant with the requirements of *Appendix 6/8-16 Allotment Topsoil*, with the exception of the following non-compliances:

Parameter	Result	Specified Requirement
Clay content	11%	15 – 25%
Stone content (>2mm)	22%	0 – 20%

These non-compliances are only considered minor when reviewed in the context of all the other results and considering the proposed end-use of this soil. They should not adversely affect the overall quality and function of the topsoil for the proposed end-use.

Chemical Parameters – SSACs

Of the potential contaminants determined, none were recorded at levels that exceeded their respective specified maximum permissible values.

We hope this report meets with your approval and provides the necessary information. Please do not hesitate to contact the undersigned if we can be of further assistance.

Yours sincerely
